Hey, thank you for buying my method! In this eBook I will show you absolutely the best method to earn Bitcoins without any investment or requirements.

This method pays around $1 per click. (You can click 1 ad once every 30 seconds)
Of course clicking one button for the whole day would be boring, so I wrote a simple script that automatically clicks on these ads every 30 seconds. If you leave your PC and the script running, you can earn around 0.02 BTC overnight. I've been using this bot for like 12 days and earned over 0.15 BTC.

And this is my Bitcoin balance after a few hours of using this method. Remember that this method requires **NO INVESTMENT**! All you need is a Telegram account and a script that clicks the ads for you. (or you can do it manually, but you will earn less money)

Guide:

1. First of all, download Telegram from this website: https://telegram.org/
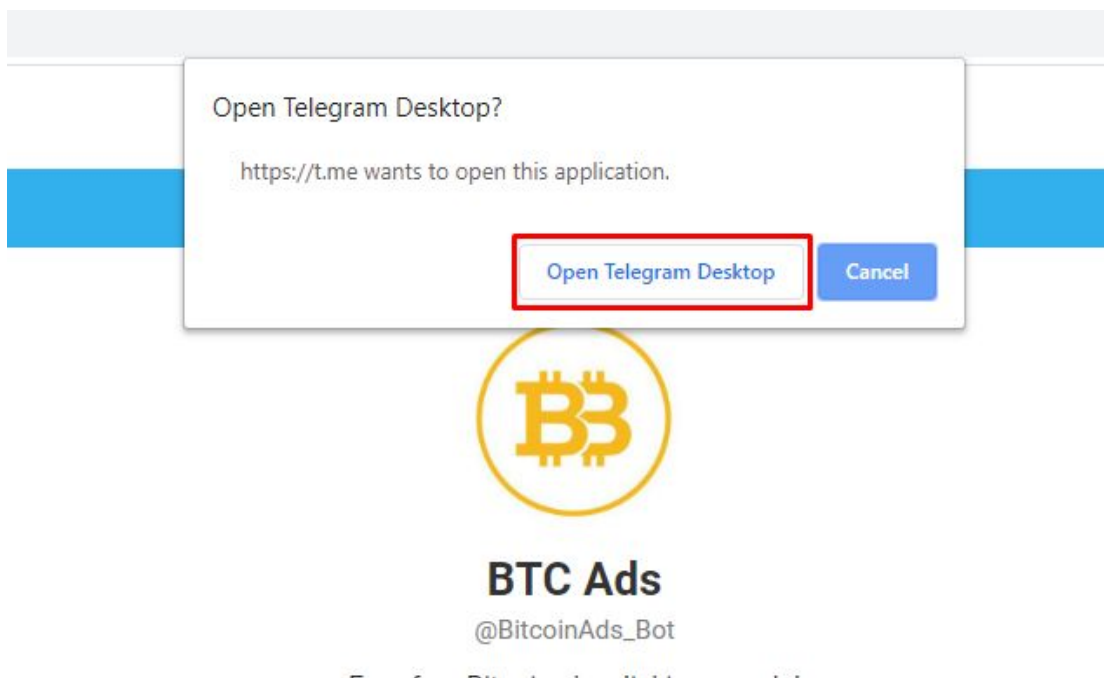

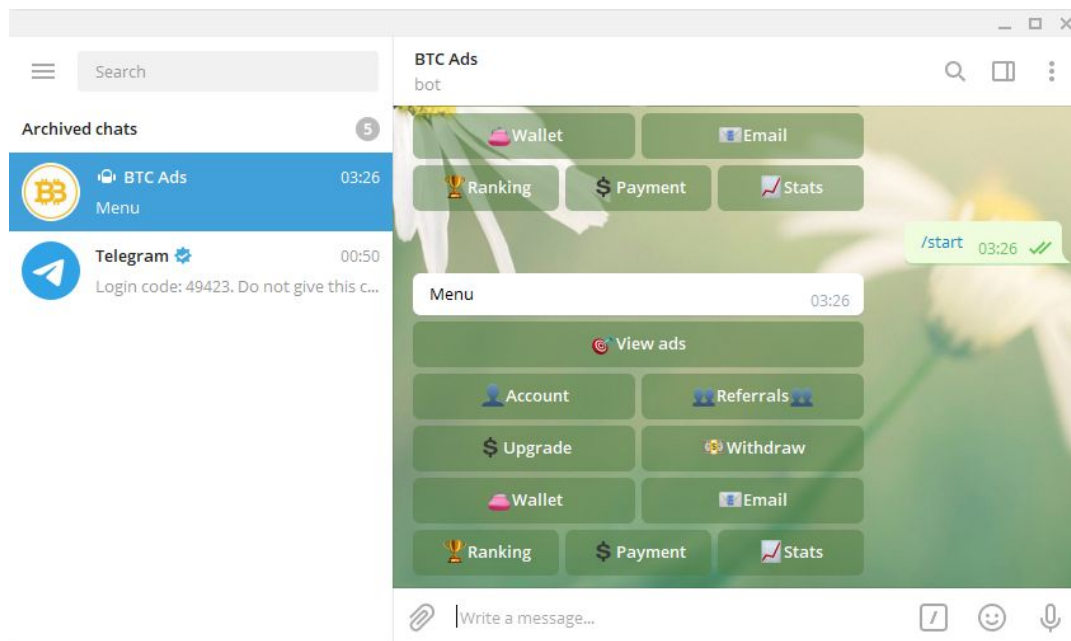

A native app for every platform

Telegram for **PC/Mac/Linux**   Telegram for **macOS**

2. Install the App, register a new account by using your phone number.

3. Now simply go to this URL: https://t.me/Bitcoin_Ad_Bot?start=1474530360 and click "Open Telegram Desktop"

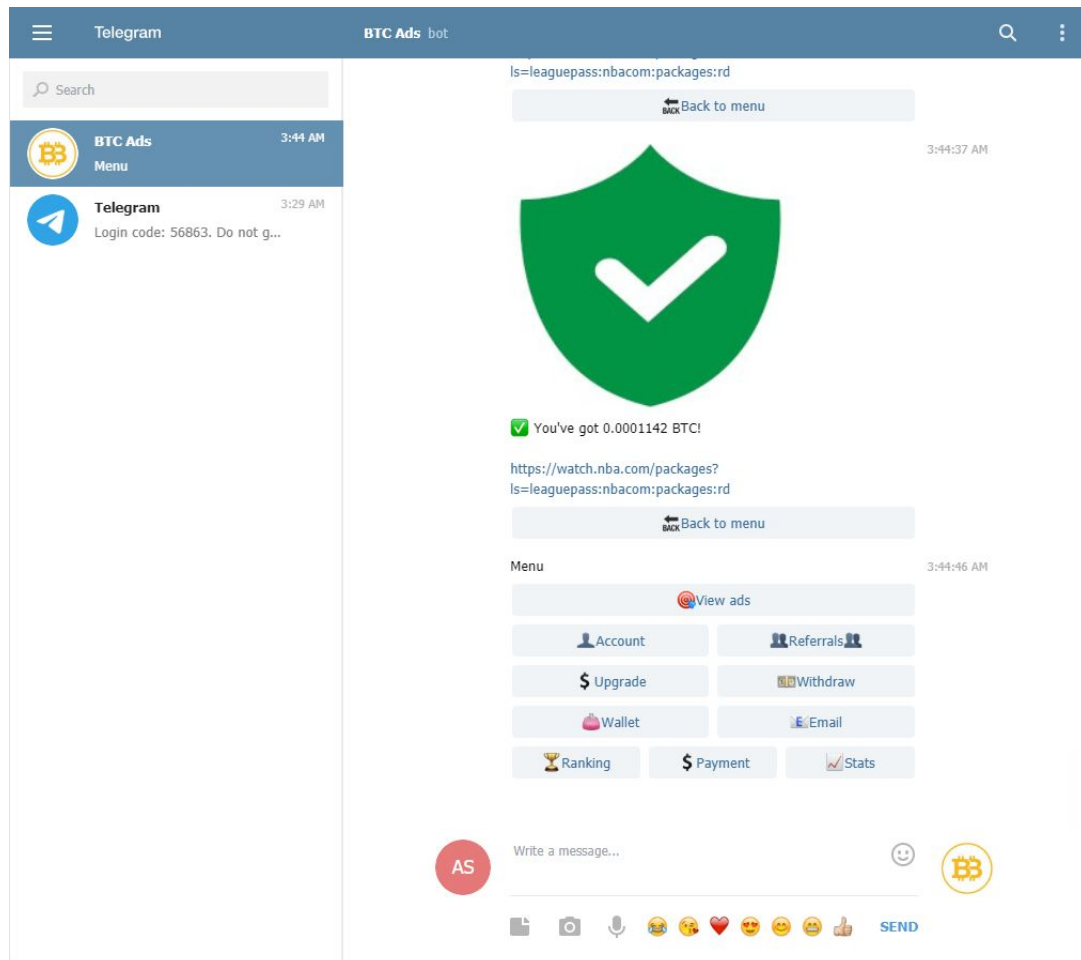

Open Telegram Desktop?

BTC Ads

@BitcoinAds_Bot

4. Now you can start earning money. Simply press "View ads" to receive 1$ in Bitcoin.

5. As I said before, clicking the ads manually is really boring, therefore I will give you my personal script to automate the whole process. To make the script work, you need to login to your account in "Web" version of Telegram. Simply go to this link: https://web.telegram.org/#/login and login to your account by providing the phone number and the code that you received in the app or in sms:
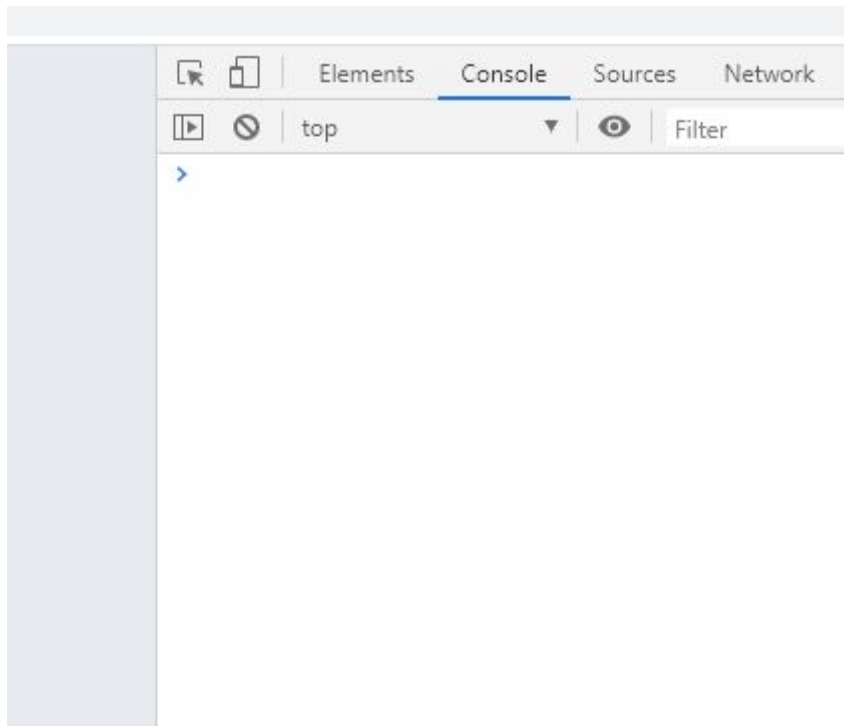

6. Now you should see a Web version of the app which looks like this:

7. Now simply right click with your mouse anywhere on the site and choose "Inspect"

8. Now go to "Console". Important: If you can't see the "Console" or "Inspect" button, make sure that you are using a Google Chrome (as I do), because in other browsers in could look a little bit different.

9. Now paste this script in the "Console" and click Enter. **The script will start after 30 seconds**. Now all you need to do is leaving the Tab open, and you will earn 1$ every 30 seconds without doing anything!

   Script is available in this link: https://pastebin.com/raw/Hf8haJcV

Using the script is optional. You can of course do it manually, but with the script you can earn like $400 over night which is huge. You won't find any method that pays you better than this one.

Enjoy!
